

SIMPLE FIRE SENSOR WITH EASYC

DESCRIPTION

On this module, there is a component, a phototransistor, which is capable of detecting infrared radiation. Since fire emits a large amount of infrared radiation, this sensor will detect it, but that is not its only application. Wherever there are IR (infrared) waves, this sensor will detect them, including from solar radiation.

The simple sensor has easyC connectors, which enables quick and easy connection with Dasduino microcontroller boards.

FEATURES

- Voltage: 3V3
- Output: digital
- There is an ATTINY404 microcontroller on the board
- easyC connectors
- Mounting holes: 4
- Dimensions: 38 x 22 mm / 1.5 x 0.9 inch
